

HOW HUMIDITY AND TEMPERATURE AFFECT BOXES

Humidity, which is strongly influenced by temperature, is a huge factor to consider when designing packaging to transport and store food products like dairy and beverages.

Corrugated is an excellent choice!

TO HELP MAINTAIN THEIR INTEGRITY, STORE BOXES AT:

40% to 70% relative humidity

40°F to 100°F temperatures

3 ways to boost box performance!

1 Use paper made with virgin fibers

2 Add a resin to the adhesive

3 Use stronger and/or heavier paper
